

HAMMER AGER*

Aging system for
segmented retaining
wall blocks

IN-LINE OR
OFF-LINE

HAMMER AGER* FOR SEGMENTED RETAINING
WALLS (SRW) REALLY REPLICATES TUMBLING.

This process drastically reduces production cost
compared to drum tumbling. Reject rate and handling
cost are reduced to almost zero.

* Patented

HAMMER AGER* TECHNOLOGY

- Continuous in-line aging process in less than 10 seconds for a "3-at-a-time" block machine (options of big board machine available).
- Virtually no additional labor cost to give a tumbled look to your split face SRW.
- Vibrating hammers use air vibrators that are completely sealed, eliminating all dust contamination and premature wear.
- This process virtually eliminates rejects and preserves all other blocks faces positioning features (pin hole, lip, tongue and groove).
- Fast set-up for different product dimensions.
- Automatic evacuation of concrete debris to scrap bucket.
- Complete enclosure for sound reduction and safety.
- Long-lasting wear parts due to oscillating movement rather than rotating movement.

* Patented US 7,063,284 B2

- The secret of HAMMER AGER* is its unique way of hitting the block edges at 45° to compress, crush and grind similar to a real tumbler. Treating also the front face exposed areas results in a true tumbled look.
- Random impact on both edges and the split face of the block combined with special hammer shape gives each block its own aged personality.
- Proven look in a mature market with more than five years of successful sales.
- Adjustable speed and impact to achieve different textures or to compensate for longer curing time.

YEARLY SAVING with Hammer Ager VS tumbling

	5,000 pallets of SRW per year	10,000 pallets of SRW per year
Direct labour	\$100,000	\$200,000
Reject (5%)	\$40,000	\$80,000
Wrapping (2\$/pal)	\$10,000	\$20,000
TOTAL SAVINGS	\$150,000	\$300,000
